When we taste food, our mouths tell us if the food is sweet, salty or spicy. But why do some people like some types of food and not others? There are many reasons. For example, some people don't like a type of food because they remember being ill after they ate it.

However, it is believed that you can change what you like. We often don't like unusual food because our brain doesn't understand it. So if you want to start liking food that is healthy, such as green vegetables, you should eat it more often. Then your brain will recognise it. You can also train your brain not to like something.
